

# Global Configurator Professional and TouchLink

# The Next Generation of Configurable Control

## ✓ Advanced Configuration Software

Global Configurator Professional supports larger, more sophisticated TouchLink™-based control systems.

## ✓ New TouchLink Touchpanels

New TouchLink Touchpanels with thin-bezel designs that complement the aesthetics of any environment.

## ✓ Powerful Control Processors

New, control processors with more port options and powerful features enable designers to create larger, more advanced AV control systems.

## ✓ Enterprise-wide Resource Management

Enterprise-wide scheduling and monitoring capabilities of GlobalViewer Enterprise and Extron's new TouchLink for iPad and Web and MediaLink® for iPad provide powerful, flexible resource management.

GC Pro is designed to combine the power of TouchLink with the flexibility of advanced configuration. As AV systems scale in size and complexity, AV control systems must be designed to both efficiently handle these new demands and be easy to use. Extron is meeting the challenges of accommodating larger, more sophisticated AV systems in several ways. We are offering new TouchLink Touchpanels, new control processors, and configuration software designed to handle advanced system configurations.

Extron's new TLP 710 Series, 7" touchpanels feature the same contemporary thin-bezel design as our TLP 1000 Series, but with a more compact form factor. The wall mount TLP 710MV and tabletop TLP 710TV feature high resolution widescreen color displays and incorporate Power over Ethernet for streamlined integration. All TouchLink Touchpanels and Ethernet-enabled MediaLink controllers can now be wirelessly-controlled from an iPad with Extron's new iPad for TouchLink and iPad for MediaLink apps. These apps give presenters the freedom to roam throughout their room or multiple rooms with the convenience of Wi-Fi.
