

## Fully Configurable Touchpanel A/V Control Systems Powerful Control Without Programming

Introducing Extron TouchLink™, the first fully configuration-based touchpanel control system with ready-to-use templates and the power to handle the control needs of single display rooms, dual display rooms, divisible rooms, multi-image systems, and video conference suites. Extron pioneered configurable A/V control systems with the MediaLink family of push-button controllers. Now, with TouchLink, Extron is set to revolutionize the way you design, install, and maintain touchpanel systems. Three new TouchLink panels feature a high resolution touchscreen with field-labelable backlit buttons, full-motion video, and many more features.

With our ready-to-use templates and drag-and-drop configuration software, TouchLink Control Systems can be deployed much faster than traditional programmable control systems and are easier and less costly to support. TouchLink Systems integrate seamlessly with Extron's award-winning GlobalViewer® Enterprise and Free GlobalViewer® software for complete A/V resource monitoring, management, and control over a computer network.

### Key Features:

- Three TouchLink Panel models: Wall mount and tabletop versions with 7" touchscreen, and a Cable Cubby® version with 3.5" touchscreen
- No programming required; TouchLink control systems use Global Configurator, the same configuration tool used for MediaLink systems
- Free GUI Configurator software with full-color templates for out-of-the-box control of popular A/V system applications
- Drag-and-drop design tool with master pages, popup pages for transport controls, multistate buttons, 3D effects, video windows, dynamic text, and more
- TouchLink and MediaLink systems integrate seamlessly using Extron GlobalViewer and GlobalViewer Enterprise software for A/V resource management and remote control
